(54) E-mail paging system

(57) E-Mail messages transmitted over an E-Mail network are routed to an E-Mail server servicing the recipient, where useful E-Mail messages can be identified, separated from the junk mail, and forwarded as directed by the recipient. The E-Mail server sends a summary of the E-Mail message to the recipient over a different network so that the recipient can select a forwarding des-

tinuation for the message. The recipient sends a selection signal to the E-mail server which then forwards the E-Mail message to the selected destination. The E-Mail message can be forwarded by the server over another network, such as the public telephone network, to a computer or a FAX machine at the recipient's office, home or other destination.
